Individual activities
- Submissions allow us to review what the students learned and applied from the session
- Gauge overall comprehension a class has for the subject through quizzes and surveys
- Gamifies the experiences and offers a different way to engage with the content
- Creates a live slide-deck session that students can join
- Pre-planned and impromptu questions can be asked throughout the presentation

Video pauses to allow students to respond to a question over the content
- Allows an instructor to determine if students are learning from video content
- Paid accounts offer more features (free account does not allow viewing of responses, just tracking of completion)
- Instant polling allows pre and post assessment of students
- Group projects and presentations show comprehension

Giant Paper/White Boards
- Shows comprehension through project based learning
- Pre-test or post-test
- Ask open-ended questions on the material covered
- Ask for something students are still struggling with (muddiest point)
- Back to the basics!

At the beginning & end of the class, have students answer a question about the content on an index card
- Collect the cards and use responses for assessment
- Assess how well students see the big picture
- Illustrate students’ conceptual knowledge
- Good for visual learners
